

CTC IT R3

RANSOMWARE. READINESS. REVIEW.

The average ransomware attack lasts 9.6 days and costs \$36,000. Can your business afford to be closed that long or hand over those hard earned dollars?*

WHAT IS RANSOMWARE?

Ransomware is malicious code that holds your data for ransom in an encrypted file until you pay for it to be released. It affects industries of all types and sizes, crippling many to the point of closure.

HOW DOES R3 PREPARE YOU?

- Documents ways to improve your technology, staff, and process
- Evaluates risk, automation security, and people security
- Gives you a report card with details on where you have gaps to fill
- Offers dependable backups
- Grants quick and safe recovery from outside threats to your network and data

HOW DO YOU TAKE ACTION?

How long would your business stay viable if it had to shut down? What happens while you're down? Do you have a strategy in place if you lose all of your data? As a business owner or manager, the answers to these questions may be critical in keeping your systems safe.

Whether you are worried about disaster recovery, ransomware, data breaches, or compliance issues, we help to secure your most critical data. CTC IT keeps up on the latest trends, hacks, and malware viruses, often notifying you before they happen. Security has been part of our DNA since 1996. By letting our team worry about securing your business' network and data, your team can focus on securing more customers and more profit.
